Water for the Way You Live™

Linis™ 4-Stage Reverse Osmosis System

Turn your tap water into pure delicious drinking water for just pennies a day!

While today's tap water can contain a broad range of impurities and contaminants, Linis Reverse Osmosis systems tackle the broadest spectrum of water impurities possible. Only RO filtration is capable of reducing impurities ranging from bacteria and viruses to agricultural run-off products like pesticides and fertilizers, to dissolved metals like lead, arsenic and iron. Studies have shown that RO technology is one of the more effective technologies at reducing trace contaminants like perfluorocarbons and trace pharmaceuticals.

- Solid, Compact Space-Saving Design
- 3.2 Gallon Tank in Steel or Plastic
- Large Selection of Designer Faucets
- Environmentally Friendly
- Economical
- Delicious!

14"W(356mm) x 6"D(152mm) x 16"H(406mm)
