

## Model G6 (New)

Global Water's model G6 is the World's most unique, and most advanced water dispensing system ever created! It holds just over 5 gallons (20 liters), and dispenses Hot/Cold as well as Ambient Water.

The G6 features dual built in cup holders, as well as a drain collection tank that catches overflow from the faucet. It has an easy to use microprocessor control panel, adjustable cooling capabilities, an advanced leak controlling system, and a modern look that cannot be surpassed by competitors. The G6 is also equipped with a hot water lock to prevent children from burning accidents, and surgical grade stainless steel reservoirs to keep water safe from chemicals leaching out of plastics. It can be equipped with any combination of filtration desired (Reverse Osmosis, Ultra Filtration, UV light sterilization, In-Tank Ozone, well water pre-treatment filter with KDF®, nano silver carbon). This model is not available through online merchants, and can only be acquired through an authorized Global Water Distributor.

The advertisement features a large image of the Model G6 water dispenser on the left, which is a tall, cylindrical unit with a black top and silver body. To its right, the text 'MODEL G6' is displayed in large yellow letters. Below this, a list of features and specifications is provided in white text. At the top right of the ad is the Global Water logo, which consists of a blue water drop containing a green and blue globe, with the words 'GLOBAL WATER' written below it. At the bottom left, there are three small inset images showing different views of the dispenser. At the bottom right, there is a larger, detailed image of the dispenser's top section, showing the faucet, control panel, and cup holders. The background of the entire ad is a dark blue gradient with faint, stylized images of water droplets and the dispenser.

# MODEL G6

20.5W x 15.7D x 51.2H/inches  
Cold/hot/ambient  
Available UV sterilization system  
LED lighting on dispensing place  
Safety lock for hot water  
Drain container  
Direct chill system  
Multi-function  
Energy saving  
Advanced leak detection system  
Adjustable temperature for cold and hot water  
Chilling capacity up to 5.28 gallons per hour  
Heating capacity up to 3.17 gallons per hour
