

Better by the Glass...

A
Better
Water Solution
A Get Filtered, Inc. Company

Pure and delicious drinking water that's better than bottled!

Your Health

Pure water is essential to good health. Proper hydration effects all of your organs and bodily functions including your heart, circulatory system, digestion, liver, kidneys and even brain function. Water helps you look your best by hydrating your skin and plays a major role in controlling body weight. **The President's Panel on Reducing Environmental Cancer Risks recommends that all households filter their tap water.**

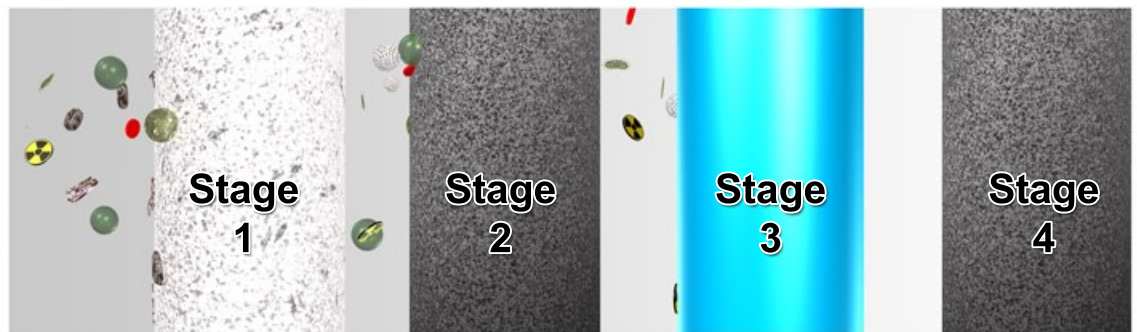

Coffee, tea, ice and all other food and beverages will taste better and will be better for you when prepared with pure water.

Reverse Osmosis (RO)

A Reverse Osmosis membrane removes impurities at the sub-micron level. Only RO technology is capable of reducing impurities ranging from pesticides and fertilizers, to dissolved metals like lead and iron, to arsenic and radium, and right on down to bacteria, viruses, and even trace pharmaceuticals.

4-Stage Reverse Osmosis Purification Process

Stage 1: The Sediment Filter captures particulates like dirt, rust, sand and silt. **Stage 2:** A Carbon Filter then removes volatile organic compounds as well as chlorine, benzene, trihalomethanes, radon, solvents and hundreds of other man-made chemicals. **Stage 3:** The Reverse Osmosis Membrane removes impurities at the sub-micron level. Only RO technology is capable of reducing impurities ranging from pesticides and fertilizers, to dissolved metals like lead and iron, to arsenic and radium, and right on down to bacteria, viruses, and even trace pharmaceuticals. **Stage 4:** A Post Carbon Filter gives the water a final polish.
